

1. Problem: Maximum Subarray Sum

Statement:

Given an integer array `nums`, find the contiguous subarray with the largest sum and return its sum.

Example:

Input: `[-2,1,-3,4,-1,2,1,-5,4]`

Output: 6

Explanation:

`[4,-1,2,1] = 6`

Approach: Kadane's Algorithm

2. Problem: Maximum Sum Subarray of Size K

Statement:

Given an array and an integer `k`, find the maximum sum of any contiguous subarray of size `k`.

Example:

Input:

`arr = [2,1,5,1,3,2]`

`k = 3`

Output: 9

Explanation:

`[5,1,3] = 9`

Approach: Fixed Size Sliding Window
